

SEE. DECIDE. ACT.

SafeZone, a unified safety, security and emergency management solution for the mining industry.

36%

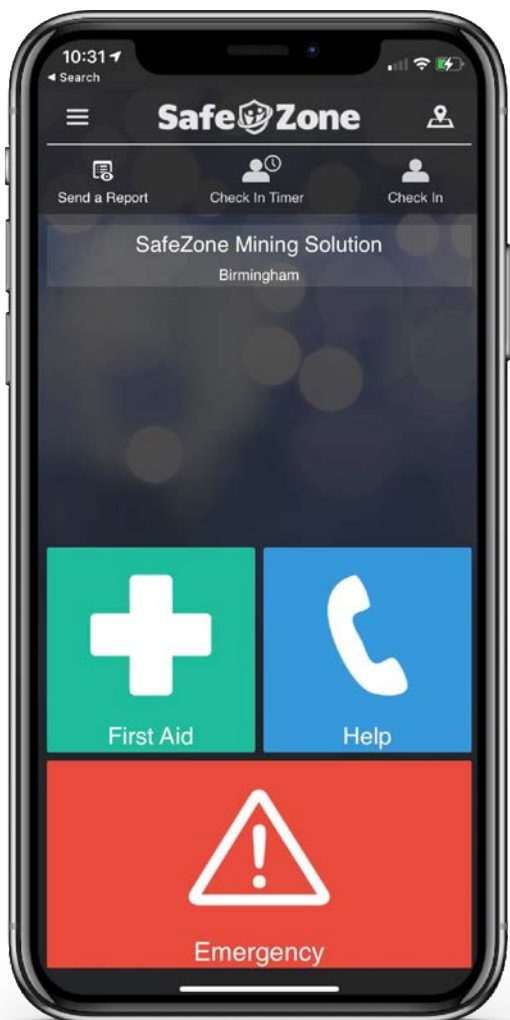

Of women and 10% of men experienced a form of sexual harassment in the past year.¹

STAFF SAFETY, EVERYWHERE

Unlike a typical staff duress system, SafeZone® helps you keep all of your employees safe with one unified system. By providing you with Safety Everywhere™, you and your staff are covered wherever you have duty of care: in the field, travelling between sites —

even coverage for interstate or international travel. Addressing these safety and security gaps is key to your organisations' success, so your staff are confident your organisation values their safety and feels protected in the workplace.

SafeZone Provides You With:

- A solution that is quick to deploy, holistic, scalable, and easy to use
- Real-time Coordination, communication, and Response, for faster and more effective resolutions
- Operational Insights™ to optimise future response

Use the SafeZone App to get help, receive alerts, proactively share location, set safety timers, share actionable information with locations, be stood up for active assistance.

Responders using SafeZone's OmniGuard can visualize incidents, communicate their availability, provide targeted communications to groups or individuals, and respond to incidents as they happen.

Command receive a real-time view of incidents as they unfold and the resources available to respond, empowering their teams to keep your people safe.

¹<https://www.smh.com.au/business/workplace/one-fifth-of-wa-women-in-mining-have-been-sexually-assaulted-survey-reveals-20210816-p58j83.html>

Workplace Violence Mitigation

Staff can easily raise alerts sharing their location and profile so first responders can acknowledge receipt and respond quickly to positively influence the outcome of the incident. Walk-to-Room features can insure any staff member can safely return to accommodation.

Remote Worker Protection

All staff can check-in, share their location and discreetly send an emergency alert to receive assistance regardless of their location at any time. Customisable escalation paths can be set to insure all locations have a response protocol.

Operational Insights

Provides insights to optimise performance with use of patrol area heat-maps and auto-recorded incidents to train and enhance team performance.

Location Based Mass Notifications

Send targeted communications to staff based on location or groups with ease in seconds.

Tip Reporting

Not every event is an emergency, but maintenance should never be forgotten. Easily report non-urgent issues before they get out of hand.

Fastest Possible Response

Availability and location of security officers is known 24/7 so they can be dispatched quickly and efficiently and reduce response time to enhance outcomes.

Be Ready for Any Incident or Emergency

Incidents come in all forms when working in remote regions. Major weather events, venomous creatures and unruly people can all strike without warning. SafeZone acts as a force multiplier to reduce response times producing better outcomes. When your staff feels safe, they can focus and do their job more effectively. SafeZone can help mining companies demonstrate their commitment to union and community calls for change. After recent reports highlighted the challenges with sexual assault in the mining industry, tools such as duress, walk to room and anonymous reporting assist in bringing change for a safer community.
