SafeZone™ for Critical Infrastructure

## SafeZone™ is a cloud-based platform delivering real-time visibility of people, sites, and incidents

CriticalArc's award-winning SafeZone solution offers transformational capabilities to empower Critical Infrastructure organisations, uniquely delivering *Safety Everywhere™*. Regardless of duty of care requirements or disparate safety systems, CriticalArc's SafeZone helps organisations comply with the **Security of Critical Infrastructure Act 2018**, protecting lone workers, supporting rapid incident response, and meeting mandatory risk and reporting obligations under Australian law.

As a market leader for over a decade, CriticalArc has extensive experience in delivering location-based safety, security, wellbeing, and emergency management services with unparalleled precision.

The Leading All-In-One Solution

Unlike other solutions on the market, SafeZone unifies multiple security and safety capabilities under one efficient 24/7 support and response system, including:

- **Protecting lone workers in remote, high-risk environments**

- **Meeting Critical Infrastructure Risk Management Program (CIRMP) obligations**

- **Coordinating fast response across large, dispersed teams and assets**

- **Communicating clearly across multilingual workforces**

- **Capturing and reporting incidents under strict timeframes**

- **Operating without fixed infrastructure or reliable communications**

What Makes SafeZone Unique?

Unlike traditional safety systems that are costly, complex and tied to fixed infrastructure, SafeZone by CriticalArc is fast to deploy, simple to scale and does not require major capital investment. SafeZone a fully standalone solution, making it suitable for remote, high-risk and distributed environments. Whether protecting a single location or multiple field locations, SafeZone delivers real-time visibility and response capability with minimal operational impact.

Built for Compliance.
Engineered for Rapid Response.

SafeZone™ is an enterprise-grade safety and incident management platform that equips organisations to protect lone workers, coordinate emergencies, and meet regulatory obligations across all critical infrastructure sectors. It enables real-time visibility of personnel, coordinated response, and geo-targeted or mass communications, backed by automated incident logging for audit and compliance reporting.

- Monitor lone status in real time
- Receive duress alerts with exact GPS location
- Send mass communications during emergencies
- Mobile and control room-based incident coordination
- Automatically log and report all incident activity for compliance
- *Safety Everywhere* across mobile, Wi-Fi and satellite
