

Healthcare Staff Safety Solutions

Staff Safety, Everywhere.

From the Hospital to the Patient's Home

CriticalArc's award-winning SafeZone solution offers transformational capabilities to empower healthcare institutions, uniquely delivering **Safety Everywhere™**. Regardless of duty of care requirements or disparate safety systems, CriticalArc's SafeZone provides healthcare organizations the ability to enhance safety across hospitals, parking garages, medical office buildings (MOBs), and even in community and patient home settings - all through one unified solution.

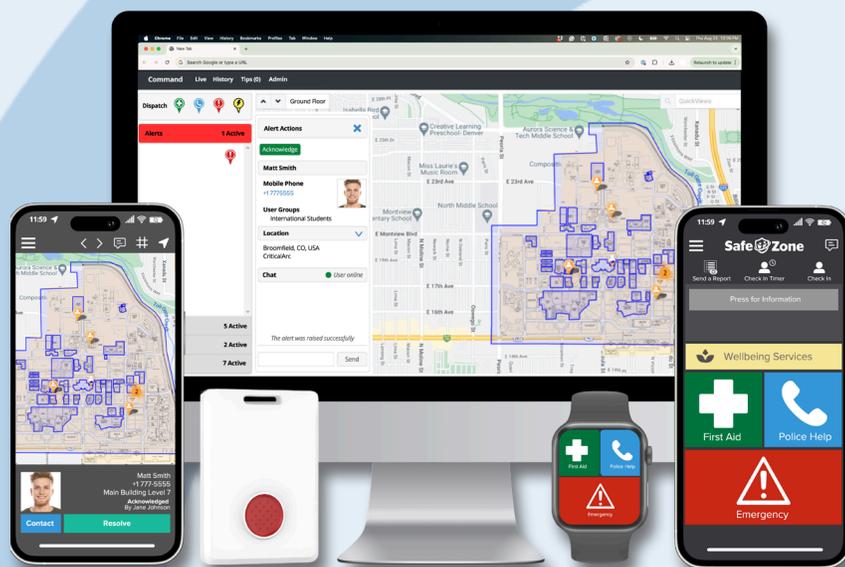

As a market leader for over a decade, CriticalArc has extensive experience in delivering location-based safety, security, wellbeing, and emergency management services with unparalleled precision. SafeZone's indoor positioning provides **sub-10-foot accuracy**; any room, any floor, and any building.

Major Risks Deserve Complete Coverage

CriticalArc's SafeZone combines all your essential safety and security functions within a single, streamlined, easy-to-manage platform - including personal safety, response team coordination and response visualization, anonymous tip reporting, emergency communications, and incident management functions. It gives you a unique foundation for transforming the safety culture at your university and engaging your whole community.

Unlike other solutions on the market, SafeZone unifies multiple security and safety capabilities under one efficient 24/7 support and response system, including:

- Workplace Violence Mitigation
- Lone/Remote Worker Safety
- Location-Based Mass Comms.
- Fastest Possible Response
- Operational Insights
- Wellbeing Support
- Real-Time Visualization & Coordination of First and Secondary Responders

Proven Return on Investment

Widespread adoption of SafeZone is underpinned by its unique record of high user-engagement, positive sentiment among users, and creating workplace cultures in which all staff not only are safer, but **feel safer**.

SafeZone partners have seen a clear return on investment, citing the platform's support with recruitment and retention, increased positive patient outcomes, enhanced efficiency thanks to its ability to unify previously siloed systems, and improved staff retention.

Faster Response Times

Seconds matter when responding to any event or request for help reported by a member of staff. Whether an elevated medical emergency, a violent incident, or an all-hazards emergency, providing your responders with precise details of 'who called, from where, and why' greatly reduces the time it takes them to respond. In addition, SafeZone enables your team to respond to incidents indoors, outside, and even beyond your premises, wherever your people are when they call for help.

“When somebody uses SafeZone instead of only calling 911, we can pinpoint their location more accurately.

And now, with the indoor positioning solution, we even know the floor, wing, and room where that help is needed.”

- **Randy Repola, Chief of Police,**
CU Anschutz Medical Campus

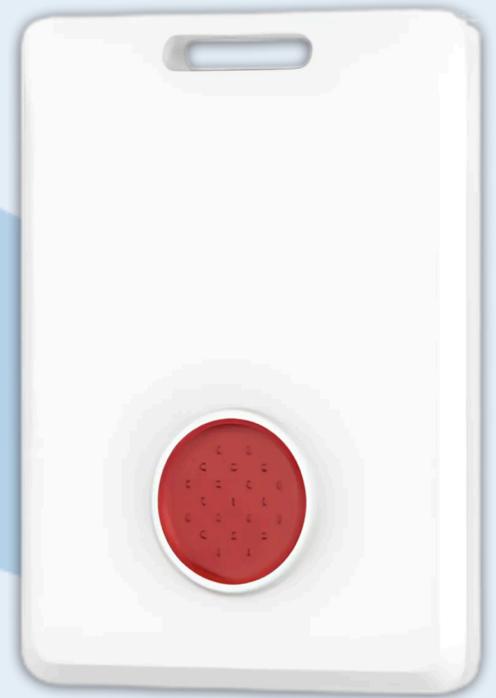

What Makes SafeZone Unique?

Unlike traditional RTLS systems that require significant capital investments to deploy proprietary hardware, CriticalArc's SafeZone leverages existing customer environments to deliver a scalable, secure, and robust safety solution. By utilizing a customer's **Bluetooth-enabled Wi-Fi network** (supporting Cisco, Juniper, and HPe Aruba), SafeZone minimizes deployment costs and complexity. For organizations yet to upgrade their network infrastructure, CriticalArc's SafeZone also offers a **standalone or hybrid Bluetooth network solution** powered by its technology partner, Polestar.

New Wearable Device Puts Staff Safety in Their Hands

SafeZone's wearable duress device, **SafeZone Companion**, was designed to redefine personal safety. Engineered with innovative state-of-the-art technology and intuitive design, SafeZone Companion empowers you to navigate the workday with confidence, ease, and assurance, knowing help is just a touch away. With features like:

- Instant Alerts
- Discreet Design
- 24/7 Support
- Long-Lasting Battery
- Non-Proprietary Network
- One-to-Many Escalations
